

Property-Results

Table of contents

1 Description.....	2
2 Parameters.....	2
3 Parameters specified as nested elements.....	2
4 Examples.....	2

1. Description

Processes a propertiesquery and executes successtarget or failtarget based on each matched property's value.

2. Parameters

Attribute	Description	Required
value	The name of the referred parallel container	Yes
failtarget	The name of the target to call when matched property is equal to value	Yes
successtarget	The name of the target to call when matched property is not equal to value	Yes

3. Parameters specified as nested elements

propertiesquery

A [propertiesquery](#) object.

4. Examples

Processes the propertiesquery syncresults and will execute dosuccess or doerror target based on each property's value equal to zero or not

```
<property-results value="0"
  successtarget="dosuccess"
  failtarget="doerror">
  <propertiesquery refid="syncresults"/>
</property-results>

<target name="dosuccess">
  <echo level="info">object ${node} succeeded</echo>
</target>

<target name="doerror">
  <propertycopy from="stderr.${node}"
    property="err"/>
  <echo level="info">object ${node} failed, stderr: ${err}</echo>
</target>
```
