1. Releases

1.1. CTL 1.0

May 15, 2008 - Fifth snapshot release

Now can turn off the automatic update of the deployments and nodes properties files by unsetting the `framework.webdav.uri` flag.

Fixed bugs that effected JobCenter's ability to execute static commands.

May 05, 2008 - Fourth snapshot release

Consolidated CTL software releases into a single "bundled" release that includes the core `ctl-dispatch`, `coreutils` and `Projectbuilder`.

Apr 23, 2008 - Third snapshot release

Added `-s,--scriptfile` that allows execution of a locally defined script across matching nodes.

Added `-S,--stdin` flag signifying `ctl-exec` reads statements from `stdin` and executes those across matching nodes.

Added `-q,--quiet` flag to run commands in quiet mode, showing only error messages.

Apr 15, 2008 - Second snapshot release

New `ctl-exec` command added! Now can execute any ad-hoc command using node dispatching. Enhanced node dispatching filtering options. Both `ctl` and `ctl-exec` an now filter on Node metadata.

Mar 25, 2008 - First snapshot release

First release of CTL control dispatch framework.
