-----------------	---

1. Overview

This file contains the metadata describing the type.

```
<property file="${module.dir}/type.properties"/>
```

Common

The table below lists the properties defined for any type

Property	Description
type.name	Name of the type
types.description	Description of the type and its use.
type.role	Declares it concrete or abstract.
type.supertype	The type's supertype
type.unique-instance-names	Boolean value specifying if objects should be uniquely named.

Example

```
type.name=Apache
type.description=Module for controlling apache deployments
type.role=concrete
type.supertype=Managed-Entity
type.unique-instance-names=true
```
