

Roadmap

Table of contents

1 General.....	2
2 ctl-exec.....	2

CTL's development roadmap is driven by you so let your voice be heard and tell us what you think is missing or would make CTL better! Everything here was suggested by someone in the community.

1. General

- man pages: Provide *roff formatted manuals for all the CTL commands and even the generated docs from ProjectBuilder. This could be done via pod2man.
- Shell tool to script the registration of nodes and deployments configuration files.

2. ctl-exec

- Execution via JobCenter: Allow the definition of ctl-exec commands in JobCenter UI.
- -R,--retry flag. Like -K,--keepgoing except it will cycle back and retry hosts where command failed
- Deferred retry. Like -R except failed jobs are spooled for later execution by JobCenter.
- Report generation via ReportCenter
